THE AWAKENING

FOR A **SAFE** | **RESILIENT** | **DURABLE** BUILT ENVIRONMENT

*Let's join hands to safeguard our
buildings through the right eyes and
the right solutions...*

Dear Friends,

At Creative Design Consultants & Engineers Pvt. Ltd. (CCEPL), our journey has always been driven to safeguard the built environment and support the nation's larger goal of creating safe, resilient, durable and sustainable infrastructure for all.

Over the years, we have witnessed the gradual degradation of many RCC buildings and structures at an early age, as low as 7-10 years of construction. The absence of periodic structural assessments and thereby, improper actions/inactions on remediations of the distresses, the service life of such buildings and structures have shortened significantly, sometimes leading to demolition within 15-20 years of construction. Recognizing this growing concern, we conceptualized and conducted a comprehensive 12-week Skill Development and Training Program, under our initiative SAAR, focused on the Structural Audit and Assessment of RCC Structures. We are pleased to share that we have successfully completed the second program in this series "Structural Auditor Training Program" conducted from 20 Dec 2025 to 14 Mar 2026. This continued initiative reflects our commitment to building technical capacity and strengthening professional practices in structural safety and durability.

Through this initiative, we aim to equip engineers, site professionals, and aspiring consultants with scientific methods, national standards, and hands-on training essential for ensuring the health and safety of our built environment.

In line with this vision, we have planned the event, "**The Awakening for a Safe, Resilient & Durable Built Environment,**" bringing together all stakeholders and like-minded professionals, policymakers, homeowners, consultants, academicians, and concerned citizens, who share the collective responsibility of creating safer and more resilient structures.

Let this event serve as a platform once again to share knowledge, raise awareness, and build collaborations that help us move closer to a future where every building stands as a symbol of strength, trust, and safety. Together, let us create a world where structural integrity is not a luxury but a norm, a world where we truly awaken to the need for a Safe, Resilient, Durable and Sustainable Habitat for All.

Warm Regards,

Aman Deep

Managing Director
